Step 5 - Do Not Allow the Hospital to Treat Your Loved Ones With:  
Remdesivir + Midazolam + Dexamethasone + Vancomycin = Death  
Remdesivir 101 - <https://timetofreeamerica.com/follow-the-money/#scroll-content> Midazolam - <https://dailyexpose.co.uk/2021/08/02/nhs-staff-ordered-to-overdose-patients-with-midazolam-for-covid19/>  
Dexamethasone - Dexamethasone, a corticosteroid, is similar to a natural hormone produced by your adrenal glands. It often is used to replace this chemical when your body does not make enough of it. It relieves inflammation (swelling, heat, redness, and pain) and is used to treat certain forms of arthritis; skin, blood, kidney, eye, thyroid, and intestinal disorders (e.g., colitis); severe allergies; and asthma. Dexamethasone is also used to treat certain types of cancer.

Vancomycin - Vancomycin is used to treat an infection of the intestines caused by Clostridium difficile, which can cause watery or bloody diarrhea.
